EDUCATION

University of Utah <i>Master of Science in Information Systems (GPA: 4.0)</i>	Salt Lake City, UT <i>Aug 2025 – Current</i>
Incheon National University <i>Bachelor of Engineering in Industrial & Management Engineering (GPA: 4.1 / 4.5)</i>	Incheon, South Korea <i>Mar 2019 – Aug 2025</i>
Weber State University <i>Bachelor of Science in Management Information Systems (GPA: 3.87)</i>	Ogden, UT <i>Jan 2024 – Apr 2025</i>

TECHNICAL SKILLS

Programming Languages: Python, Java	Databases: PostgreSQL, MySQL
Data Analytics: R, Tableau, KNIME	Web Development: HTML, CSS, JavaScript
Data Visualization: Power BI	Project Management: Microsoft Project

EXPERIENCE

Teaching Assistant – Introduction to Data Analytics, University of Utah <i>Part-time Teaching Assistant</i>	Salt Lake City, Utah <i>Jan 2025 - Present</i>
- Guided students in data cleaning, visualization, predictive modeling, and interpretation of analytical results using Python-based analytics tools. - Supported students in translating model outputs into clear business insights through reports, presentations, and applied analytics projects. - Reviewed analytics projects for methodological soundness, data interpretation, model evaluation, and business relevance.	
Industrial Intelligence Laboratory, Incheon National University <i>Research Assistant</i>	Incheon, South Korea <i>Nov 2022 – Jan 2024</i>
- Built an optimization-based decision support tool to simulate electroplating schedules, evaluate resource requirements, and visualize operational performance. - Reduced required hoists by 25% and decreased per-product plating time by 1.5% through improved scheduling logic. - Co-invented and filed a Korean Patent (No. 10-2024-0007227) and published related research in the <i>International Journal of Precision Engineering and Manufacturing</i>.	

COMPETITIONS

Gen AI Hackathon: AI-Powered Community Health Ordering & Fulfillment System, University of Utah	<i>Mar 2026</i>
- Developed an LLM-powered web application to modernize community health request intake, fulfillment routing, and administrative review workflows. - Automated urgency assessment and request summarization to highlight event details, key considerations, incomplete information, and required follow-up actions. - Built an administrator-facing dashboard to track request status, fulfillment type, event details, and workflow progress.	
1st Place – 2025 KPMG Layton Data Analytics Challenge, University of Utah	<i>Nov 2025</i>
- Built an employee turnover prediction model using Explainable Boosting Machine to identify key drivers of attrition. - Conducted demographic and workforce analysis to translate complex employee data into actionable business insights. - Designed an interactive dashboard and stakeholder-facing presentation to communicate model findings, tradeoffs, and recommendations.	
2nd Place – 2024 Game Day Analytics Challenge, University of Utah	<i>Feb 2024</i>
- Analyzed Super Bowl advertising effectiveness using large-scale Twitter (X) social media data - Conducted time-series, sentiment, and cost-effectiveness analyses to evaluate brand impact - Applied the Analytic Hierarchy Process (AHP) to integrate multiple performance metrics into a unified ranking	
Graph Attention Network (GAT) – based Supply Chain Relationship Prediction Model	<i>Jan 2024 – Sep 2024</i>
- Proposed a GAT-based link prediction model integrating node and text embeddings to predict inter-company supply chain relationships - Demonstrated high performance with an average accuracy of 84% across five datasets - Published research in <i>Expert Systems with Applications</i> based on the proposed GAT model
